MARGINAL FREQUENCY REPORT	10

Methodology

The survey findings presented in this release are based on the results of interviews conducted August 4 - 10, 2008. The interviews were conducted at the Center for Opinion Research at Franklin & Marshall College under the direction of the poll's Director, Dr. G. Terry Madonna, Head Methodologist, Berwood Yost, and Project Manager, Jennifer Harding. The data included in this release represent the responses of 641 adult residents of Pennsylvania who are currently registered to vote. Telephone numbers for the survey were generated using random digit dialing, and respondents were randomly selected from within each household. Final survey results were weighted to adjust for different selection probabilities and non-response.

The sample error for registered adults is +/- 3.9 percent. In addition to sampling error, this poll is also subject to other sources of non-sampling error. Generally speaking, two sources of error concern researchers most. Non-response bias is created when selected participants either choose not to participate in the survey or are unavailable for interviewing. Response errors are the product of the question and answer process. Surveys that rely on self-reported behaviors and

attitudes are susceptible to biases related to the way respondents process and respond to survey questions.

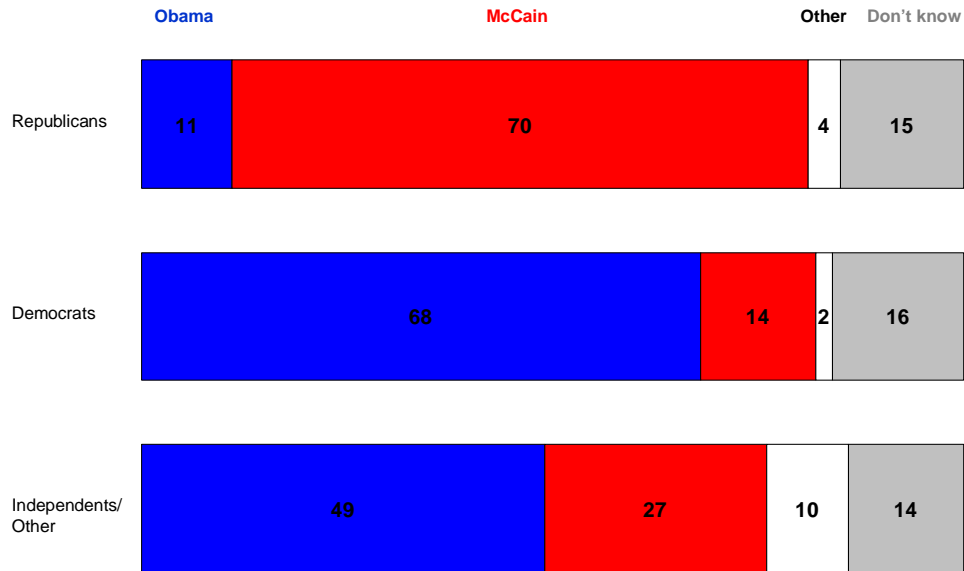

This Franklin & Marshall College Poll is produced in conjunction with the Philadelphia Daily News, WGAL-TV, Pittsburgh Tribune Review, WTAE-TV, WPVI-TV/6ABC, and Times-Shamrock Newspapers. It may be used in whole or part, provided any use is attributed to Franklin & Marshall College.

Key Findings

The Presidential Election

The Franklin and Marshall College August 2008 survey of registered Pennsylvanians finds Democrat Barack Obama leading Republican John McCain by eight points, 44% to 36%. Obama's lead is smaller among likely voters, 46% to 41%. Obama holds a sizable lead among younger residents, non-whites, college graduates, women, and residents of Philadelphia (see Table A-1). McCain has an advantage with Protestants, fundamentalist Christians, and residents of northeastern and northwestern Pennsylvania. Both candidates fare well among their party faithful, and Obama has an advantage among independents (see Figure 1).

Figure 1. Pennsylvania Presidential Preference by Party Registration

Attitudinal variables are also associated with vote choice. Most registered Pennsylvanians believe the country is headed in the wrong direction (77%), and more than a third (37%) is worse off financially this year than last. Obama is currently leading among both of these groups (see Table 1). The economy (43%) is most often mentioned as the issue that will influence presidential vote choices in the fall, and Obama leads McCain among registered Pennsylvanians who are motivated by economic issues.

A majority of registered Pennsylvanians believe that John McCain will mostly continue economic (55%) and foreign policies (58%) put into place by President Bush, although more Democrats and Independents than Republicans believe this is true (see Table 2). Respondents who believe that McCain will follow Bush policies are much more likely to plan to vote for Obama. If McCain's primary difficulty is that many believe he will carry on the policies of an unpopular administration, Obama's primary difficulty is his perceived

inexperience. Half (51%) of respondents say they would be concerned if Obama was elected president. In fact, more Democrats are concerned about Obama (34%) than are Republicans who are concerned about McCain (21%). About three in ten registered Pennsylvanians of each party who have concerns about Obama cite his lack of experience as their main concern.

More registered Pennsylvanians rate the candidates favorably than unfavorably. Partisan favorability scores show that John McCain is not as positively viewed among Republicans as is Barack Obama among Democrats (see Figure 2). Fewer Republicans have a strongly favorable opinion of John McCain (28%) than Democrats who have a strongly favorable opinion of Barack Obama (40%).

Figure 2. Presidential Candidate Favorability Ratings by Party

Economic Concern and Hardship

The race for the presidency is taking place at a time when Pennsylvanians are focused intently on the economy. In addition to the concerns noted earlier about the direction of the country and residents' financial standing, many Pennsylvanians mention that economic concerns are the greatest problems facing their families. Two-thirds (69%) of respondents mention an economic concern as

the biggest problem facing their families. About seven in ten (69%) believe that the problems they are facing can be solved with the help of government.

Many Pennsylvanians have suffered some economic hardships during the previous 12 months. About one in six registered adults has experienced a reduction in pay (17%) and has been without health insurance coverage (16%) at some point during the past year (see Figure 3). Overall, two in five (40%) registered Pennsylvanians have experienced at least one of the 11 listed financial hardships during the past year, and these respondents are much more likely to vote for Obama (51%) than McCain (27%) in November.
